

Colonial 18-S

Vegetable-Derived Conditioning Agent

INCI NAME Stearamidopropyl Dimethylamine
CAS NUMBER 7651-02-7
LISTINGS TSCA, AICS, DSL, IECSC, ENCS, ECL, NZIoC

Colonial 18-S is fatty amido-functional tertiary amine in flaked form. Colonial 18-S may be neutralized with a variety of acids to form a cationic amine salt. Colonial 18-S is produced from a high purity vegetable-derived grade of stearic acid.

Colonial 18-S is useful as the primary ingredient for a conditioner, finishing rinse, or cream rinse. Amine salts offer a major advantage over quaternary ammonium compounds in that they can more easily be rinsed from the hair and reduce conditioner buildup. Blended with a proper co-emulsifier, both opaque or pearly conditioner formulations can be commercially developed.

APPLICATION

Recommended use levels for Colonial 18-S:

Liquid Conditioners 0.5% - 1%
Leave-in Conditioners 1% - 2%
Cream Hair Conditioners 1% - 3%

- Colonial 18-S can also improve wet and dry combability and will reduce static fly-away.
- Simple, high viscosity, conditioning emulsions are achieved by combining neutralized Colonial 18-S with fatty alcohol.
- By neutralizing Colonial 18-S in situ with a low molecular weight organic acid, it becomes water soluble and acts as cationic conditioner.
- Neutralization with lactic acid can provide additional conditioning benefits.

TYPICAL PROPERTIES / STRUCTURE

Appearance, 25°C	Waxy Solid Flake
Acid Value	5 Max.
Alkali Value	148 - 155
Color, Gardner '98	5 Max.
% Ester	3 Max.

FORMULATION

Light, Smooth Conditioner

INGREDIENT	%
1 Water	qs to 100.00
2 Cetearyl alcohol	4.00
3 Lactic Acid (88%)	0.70
4 Colonial 18-S	1.50
5 Cola®Quat CCG	1.00
6 Phytic acid	0.05
7 Preservative	qs
8 Fragrance	qs

Typical Properties: pH: 5.0 Viscosity: 60,000 cps.

STORAGE / HANDLING

Colonial 18-S is shipped in 200 lb. (90.7 Kg) fiber drums or 50 lb. (22.6 Kg) bags. Safety Data Sheets and other information may be found at www.colonialchem.com.
